

# **ITS Technical Notes**

## **Windows Enterprise Announcement**

**February 28, 2006 – Actions Completed February 2006**

### **Postal Address Information Loaded**

Campus postal address information has been loaded for all Active Directory user objects in the Enterprise domain. These fields are the street, city, state and zip attributes for each user object.

For faculty and staff the university address will be used (not the home address). For students, the current “on campus” address will be used (not the permanent home address). In all cases, if the address information is suppressed by the user it will not appear in Active Directory.

### **Student User Objects Moved to New OU Locations**

Student user objects have been moved from the general “Users” container into a new “Students” OU, broken down by college sub-OU. This change will facilitate the future delegation of control of certain “service oriented” fields to college IT admins.
