Windows Enterprise Announcement Changes Completed Week of July 4, 2005

July 18, 2005 – ListSync Enters “Production Status”

The “ListSync” project has entered “production status”.

“ListSync” is a feature of the Windows Enterprise Domain. ListSync is a process that automatically populates “official university lists” into Active Directory as “Windows Global Security Groups”. These Global Security Groups contain as their membership the NetIDs (which are also login accounts in the Windows Enterprise Domain) of the people who are on that “official list”.

A new document is available titled “Official University Lists as Global Security Groups”. This document includes sections on:

- ListSync Overview
- Types of Lists Processed
- IMPORTANT Rules for Departmental OU Administrators
- Frequently Asked Questions

OU Managers are strongly urged to read the document!

This document is available in the “Windows Enterprise Design” and “OU Administrator Support” areas on the tech support web pages at:

<http://tech.ait.iastate.edu/win2000/admin/>

A direct link to the document is:
