Windows Enterprise Announcement

July 17, 2008 – PCLPR Upgrade Mandatory by Aug 14th

A new version of PCLPR is available via Scout and via www.sitelicensed.iastate.edu/software/windows/PCLPR

This version fixes a major bug and it is very important to upgrade ASAP. This bug interacts with another bug on the server side that we feel we must correct before the return of bulk of the students. We therefore will correct the server side on August 14th (the Thursday of the week between summer graduation and move-in week). When the server-side bug is corrected, previous versions of PCLPR will no longer work.

To make the transition easier for the lab administrators, who may prefer to distribute just the binary file instead of reinstalling the whole application, the single binary pclpr.exe is also made available via www.sitelicensed.iastate.edu/software/windows/PCLPR/pclpr-just-binary.zip.

This does not affect "NetPrint" clients for Linux, OSX, or Project Vincent.
