Windows Enterprise Announcement

March 30, 2011 – New Anti-Virus Software Adopted for Iowa State

IT Services now offers Microsoft Forefront Endpoint Protection for Windows computers on campus. The addition of Forefront renders our current arrangement with McAfee redundant, as both anti-virus software programs offer similar protection. Due to this duplication of service, all campus users are encouraged to migrate to Forefront by June 30, 2011 when our current license with McAfee expires.

Forefront is NOT licensed for non-university-owned (personal) systems. Other free-ware products are recommended (most notably Microsoft Security Essentials). For the complete announcement see:
