

## **Windows Enterprise Announcement**

### **Nov 5, 2013 – Additional AD Attributes Now Mastered**

[Note: This change was discussed in recent CCSG and WinAdmin meetings]

Effective today (Tuesday, November 5, 2013) three additional AD user attributes are being mastered from official university data. The newly mastered AD attributes are:

- company -- Set to the value "Iowa State University of Science and Technology".
- division -- Set to a value of the major-operating-unit (such as "Information Technology Services"). Mastered from the master LDAP attribute "isuPersonAdministrativeUnit".
- departmentNumber -- Set to the value of the person's university department number (five digits). Mastered from the master LDAP attribute "isuPersonDeptNum".

In addition to the above three newly-mastered attributes, a change has been made to the "description" attribute for sponsored accounts. When an account has a sponsor the term "(sponsor <netid>)" will be appended to the "description". Mastered from the master LDAP attribute "description".

A list of the mastered attributes on AD user objects can be found in the section "Managing ISU Net-ID User Objects" in document located here:
